\$WOOF!

Woof.finance Whitepaper v1.1

A Decentrilized Finance (DeFi) Deflationary Cryptocurrency focused on charity with automatic 1% distribution to Holders and Burn on Each Transaction.

Introduction

The Crypto market is the wild west. We all know it, and we have probably seen the good, the bad and the ugly. We are utilizing concepts that have been successful for other charity tokens and "memetokens".

We believe in **fully involving the community** in the project development: sharing our objectives, goals and operations through our social channels, without doing anything that cannot be tracked on the ethereum blockchain itself.

Woof.finance is built upon transparency with our community and solid tokenomics which enables us to be the most charitable we can be.

What is \$WOOF! token and how it works?

\$WOOF! is an ERC20 Cryptocurrency that donates 1% of every transaction to provide care and well being to dogs around the world. That's our focus and mission and always will be.

NFT USAGE

We create NFTs that are **backed by real dogs** in animal shelters that are in dire need of care and support. We sell the NFT's and **send 100% of the donation** straight to the animal you chose. In return you get a unique one of a kind NFT backed by a real dog in need.

Upon purchase you will receive **your NFT** and we will make arrangements to donate the funds to the animal shelter housing your NFT pet, while providing proof of donations for everyone to see.

You will also receive a **special unlockable video** as a thanks for your adoption.

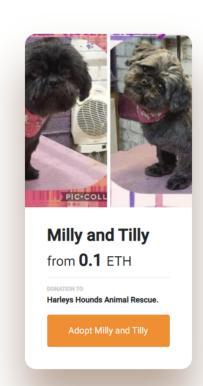

Figure 01 shows our innovative way to use NFTs to support dogs in need. We create NFTs that supporter can buy like "proof of adoption" of the pups.

Buying and Holding the \$WOOF! token

For every token purchased 1% goes directly into our charity wallet which is distributed to our shelter partners. By buying \$WOOF! token, you're directly donating to millions of dogs who are without loving families or homes. On top of that 1% is redistributed to existing token holders instantly and automatically so by helping dogs, you also help yourself. *How cool is that?*

Our Tokenomics are incredibly simple and convenient.

1% to Charity

1% of every transaction goes straight into the charity wallet, you buying and selling \$WOOF! provides more donations than ever before!

1% To Holders

1% of every transaction goes right into your pocket, all you have to do is hold \$WOOF! coin and earn instant rewards.

1% Token Burn

1% of every transaction is burned, this deflationary nature provides more value to the coins you buy and hold.

1 Trillion Max Supply

We've minted 1 Trillion tokens and that's it. No more tokens will be minted in the future but ALOT of dogs will be helped!

98% Liquidity Lock

We have put 25% of token supply into Uniswap on launch day, the further 73% will be spread onto further listings/exchanges to come.

CHECK LOCK ON UNICRYPT > CHECK LOCK ON TEAM.FINANCE >

Roadmap for the coming months

We have built up a realistic roadmap with quick and agile objectives that we are sure we can achieve, we perfectly know how unrealistic roadmaps can lead to losing trust in a project and market drops.

Q2

- Token Launch/Website
- First Charitable donation

First NFT creation

📸 🛭 • Marketing push

- Team expansion
 - Smart contract Audit
 - Exchange listings
 - Partnerships with shelters around the world
 - CG, CMC, Cerberus (Saren) listings
 - New Holder website functionality (Staking)
 - · Increased charity donations

Q3

- BSC bridge/other blockchain explorations
- Explosive marketing push
- Further development of an NFT platform
- Worldwide charitable reach (Asia, Europe, Africa and the Americas)
- Expanding permanent Shelter partnerships
- Community involvement platform

Q4

• App development compatible with IOS/Android
